PROFESSIONAL OVERVIEW

Computer science graduate with 1+ years of practical experience in backend engineering and machine learning projects. Skilled in JavaScript, TypeScript, Node.js, Express.js, Python, FastAPI, C#/.NET, PostgreSQL, and React. Experienced in developing APIs, web applications, back-office software, application tracking systems, and marketplace platforms. Seeking to contribute strong problem-solving skills and technical expertise to building scalable, maintainable software solutions.

SKILLS

Languages
TypeScript C# Python SQL

Frameworks
Node.js .NET FastAPI

Infrastructure
AWS (EC2) Docker PostgresSQL Supabase Render Vercel

PROJECTS

NovaYield | Crop Rotation Decision-Support Platform

TEAM LEAD & BACKEND ENGINEER | FastAPI, Python, MongoDB, NASA POWER API, React

- Developed backend components for an agricultural decision-support platform that helps explore climate-informed crop rotation options by integrating NASA POWER environmental data, implementing data validation, persistence, caching, and environmental indicators.
- Led the technical direction and backend development of a crop rotation assessment system covering 6 crop candidates, using 3 environmental indicators and 4 decision criteria to evaluate water resilience, soil health potential, yield stability, and labour feasibility.

NeuroScan AI | Medical Imaging SaaS Platform

FULL-STACK DEVELOPER & ML ENGINEER | Python, FastAPI, TensorFlow, React, TypeScript, Supabase

- Built a full-stack medical imaging application with 2 TensorFlow-based classification models that I trained myself, supporting brain tumour and ischemic stroke classification across 6 diagnostic categories.
- Implemented image preprocessing, model inference, and Grad-CAM visual explanations, alongside secure scan storage, user authentication, prediction history, and role-based access controls using FastAPI and Supabase.

WORK EXPERIENCE

BACKEND ENGINEER | RemoTown IT, Nuremberg, Germany — JULY 2026 – SEPTEMBER 2026

- Delivered 3 core backend features and approximately 10 REST API endpoints for a multi-tenant recruitment and talent management platform using C#/.NET, Entity Framework Core and PostgreSQL.
- Implemented database functionality for storing tenant job information, including job types, locations and role responsibilities, to support subsequent job description generation.
- Worked on backend bug fixes and completed 6 pull requests while collaborating with frontend engineers through Git-based feature branches, code reviews and CI-oriented development workflows.

FULLSTACK ENGINEER | WamiAgro Limited, Accra, Ghana — JUNE 2026 – SEPTEMBER 2026

- Developed new features and maintained an internal business application supporting farmer information and transaction data collection across 2 office staff and 5+ field officers using TanStack Start and C#/.NET Framework.
- Documented system workflows and troubleshot technical issues to support platform adoption and assist non-technical staff in using internal business applications.

FULLSTACK ENGINEER | Really Great Tech, Accra, Ghana — DECEMBER 2025 – MARCH 2026

- Developed 3 functional full-stack applications by managing their system design, development and testing using JavaScript, TypeScript, React and Express.js.
- Built approximately 8 API endpoints across the applications and designed relational database schemas using Node.js, TypeORM and PostgreSQL to support structured data storage and retrieval.

EDUCATION

Bachelor of Science in Computer Science — Second Class Honours, Upper Division (CWA 62.14/100)
Kwame Nkrumah University of Science and Technology, Kumasi, Ghana — Graduated: 2025

CERTIFICATIONS

Artificial Intelligence Fundamentals by IBM
